### 7.1 Magnitude Earthquake, Puebla, State of Puebla, Mexico

On 09/19/17 at 1114 hours, a magnitude 7.1 earthquake occurred near Puebla, Mexico.

- Per Cal OES International Affairs, the Mexican State of Baja California has activated their State Operations Center (SOC).
  - The director for the Baja California SOC will deploy with a 62 member Urban Search and Rescue (USAR) Team.
  - Baja California indicates airlines are shut down and they are looking for aircrafts within the state that can fly them to Mexico City.
  - Baja California is asking for MRE – food packages.
- US Geological Survey (USGS) reports that overall, the population in this region resides in structures that are a mix of vulnerable and earthquake resistant construction. The predominant vulnerable building types are adobe block with concrete bond beam and mud wall construction.
- Recent earthquakes in this area have caused secondary hazards such as tsunamis and landslides that may have contributed to losses.
- The Cal OES Earthquake and Tsunami Program Duty Officer (EQTP DO) reports that this size incident will result in numerous potentially large aftershocks over the next several days to weeks.
- Cal OES Duty Officers and International Affairs will continue to monitor the situation.

### Hurricane Irma Deployments, Puerto Rico

Resources requested in support of impacts due to Hurricane Irma:

- California US&R Task Force 6 (CA-TF6), Riverside Fire Department – Mission Ready Package (MRP) Canine with 7 personnel.
  - Demobilization order has been rescinded and they remain in Puerto Rico in anticipation of a new storm.

# **WEATHER OF CONCERN**

## **Weather of Concern**

- Strong and gusty winds are expected in portions of mountainous and valley locations in California.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

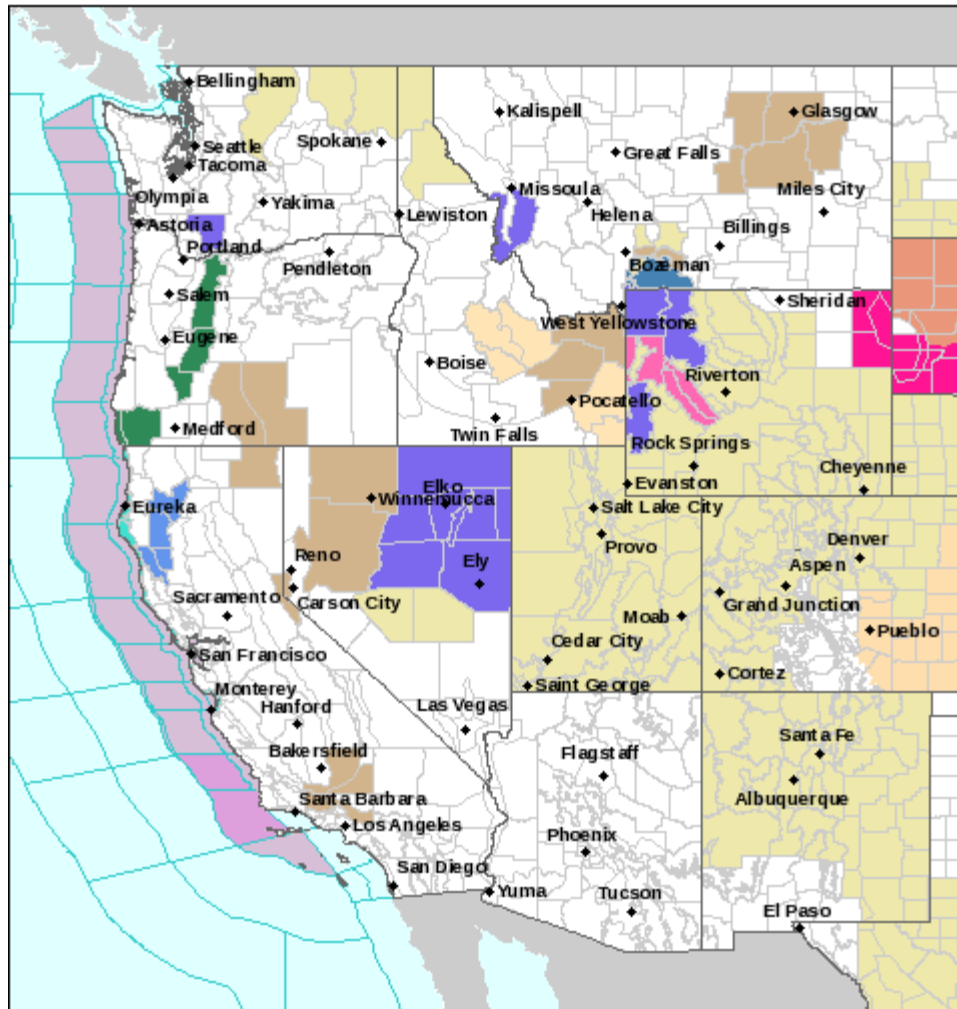

A deep low pressure trough will be over the region through Thursday. Light rain showers will continue on and off north of the line from Cape Mendocino to Alturas. A wave of precipitation through today may reach as far south as Santa Rosa the west and the central Sierra in the east, with sprinkles even at lower elevations. Snow levels will drop to as low as 6000 ft. in the north and 7000 ft. in the south by tomorrow. There will still be a few showers in the north and east on Friday as the trough moves into the Great Basin.

Temperatures will be 15-20 degrees below normal and humidity remain above 30%, even in the driest inland areas. Southwest-northwest winds will be gusty at times through today, especially over the higher terrain and east of the Cascade-Sierra crest where peak gusts will be 35-45 mph during afternoons. Winds will diminish tomorrow, then become north-northeast late tomorrow as the trough slowly moves east and high pressure over the Pacific begins to build onshore. Confidence is increasing that this will be a moderately strong wind event that will bring low humidity and above normal temperatures to wind-prone areas from the western Sierra slopes to the coast, peaking early next week.

## **SOUTHERN CALIFORNIA**

A trough will remain over the area through the workweek, which will result in below normal temperatures and breezy conditions at times. Onshore pressure gradients will allow northwest winds of 15-25 mph to develop along the central coast. Also expect west winds of 20-30 mph across the Kern County Mountains, Antelope Valley and Banning Pass. Temperatures will range from the upper 60s at the coast to 80s in the valleys to near 100 in the low desert. Minimum relative humidity (RH) will be lowest along the north side of the Angeles and San Bernardino National Forests where readings may reach the mid teens through today . A deeper trough will bring even cooler weather to the region and widespread drizzle may be possible tomorrow morning. Some light showers may also develop in the Sierras tomorrow afternoon, but precipitation amounts will be very light. Highs Thursday may only be in the 50s in the mountains to the 70s in the valleys with only limited clearing in the afternoon. West winds of 25-40 mph will be possible in the same desert interface regions, as well as the eastern Cleveland National Forest Thursday afternoon. This weekend, warmer and less windy weather is expected. Very light northeast winds under 15 mph will be possible Sunday morning over the region. No thunderstorms are expected throughout the period.
